Chicago, Illinois

IN ISSUING this catalogue, it has been our aim to show as complete a selection of designs as possible, comprising relief ornaments of different styles, from the classics up to the modern schools.

¶ A catalogue naturally being limited, it is impossible to show every design we have, and as we make new designs every day, we cordially invite interested parties to communicate with us. If a design wanted is not found in this book, we have the facilities to execute special work exactly in accordance with particular requirements, and solicit your correspondence.

Architectural Decorating Company

Instructions and Explanations

The ornaments illustrated in this catalogue are manufactured by us in the following materials:

FIBROUS PLASTER in connection with interior plaster finish.

EXTERIOR COMPOSITION for exterior decorations.

INTERIOR COMPOSITION a substitute for hand carving, showing a perfect imitation of the natural wood in respect to color and grain.

PORTLAND CEMENT ORNAMENTS for building purposes as well as for lawn decorations.

NOTE—On top of each price list accompanying cut we specify in what particular material we manufacture the designs shown on cuts.

COVES—The illustration shown on top of this page shows a section of a cove, giving its exact position to ceiling and wall. We furnish coves with a background averaging $\frac{1}{2}$ " in thickness and finished with a moulding both on wall and ceiling. The material can either be nailed or screwed to ceiling. Nail or screw holes, also joints between casts, should be pointed up with fine plaster of Paris. If no mouldings are shown on cut for top and bottom of cove, suitable wood mouldings will be furnished with cove.

CORNICES—Cornices are nailed or screwed in place on wall and ceiling on wood lath. On fire-proof construction cornices have to be fastened with wire hooks or bolts. Joints between casts should be pointed up with fine plaster of Paris.

Ornaments of very low relief are furnished on *Cheese Cloth* back, which prevents breakage in transit and insures an easy application. Ornaments on cheese cloth back should be pasted to the plastered surface with rye-flour paste. This paste is made with boiling water and rye-flour to which should be added one-half pint of Venetian turpentine to each pail of paste. The ornaments should also be nailed with wire brads as a further safeguard.

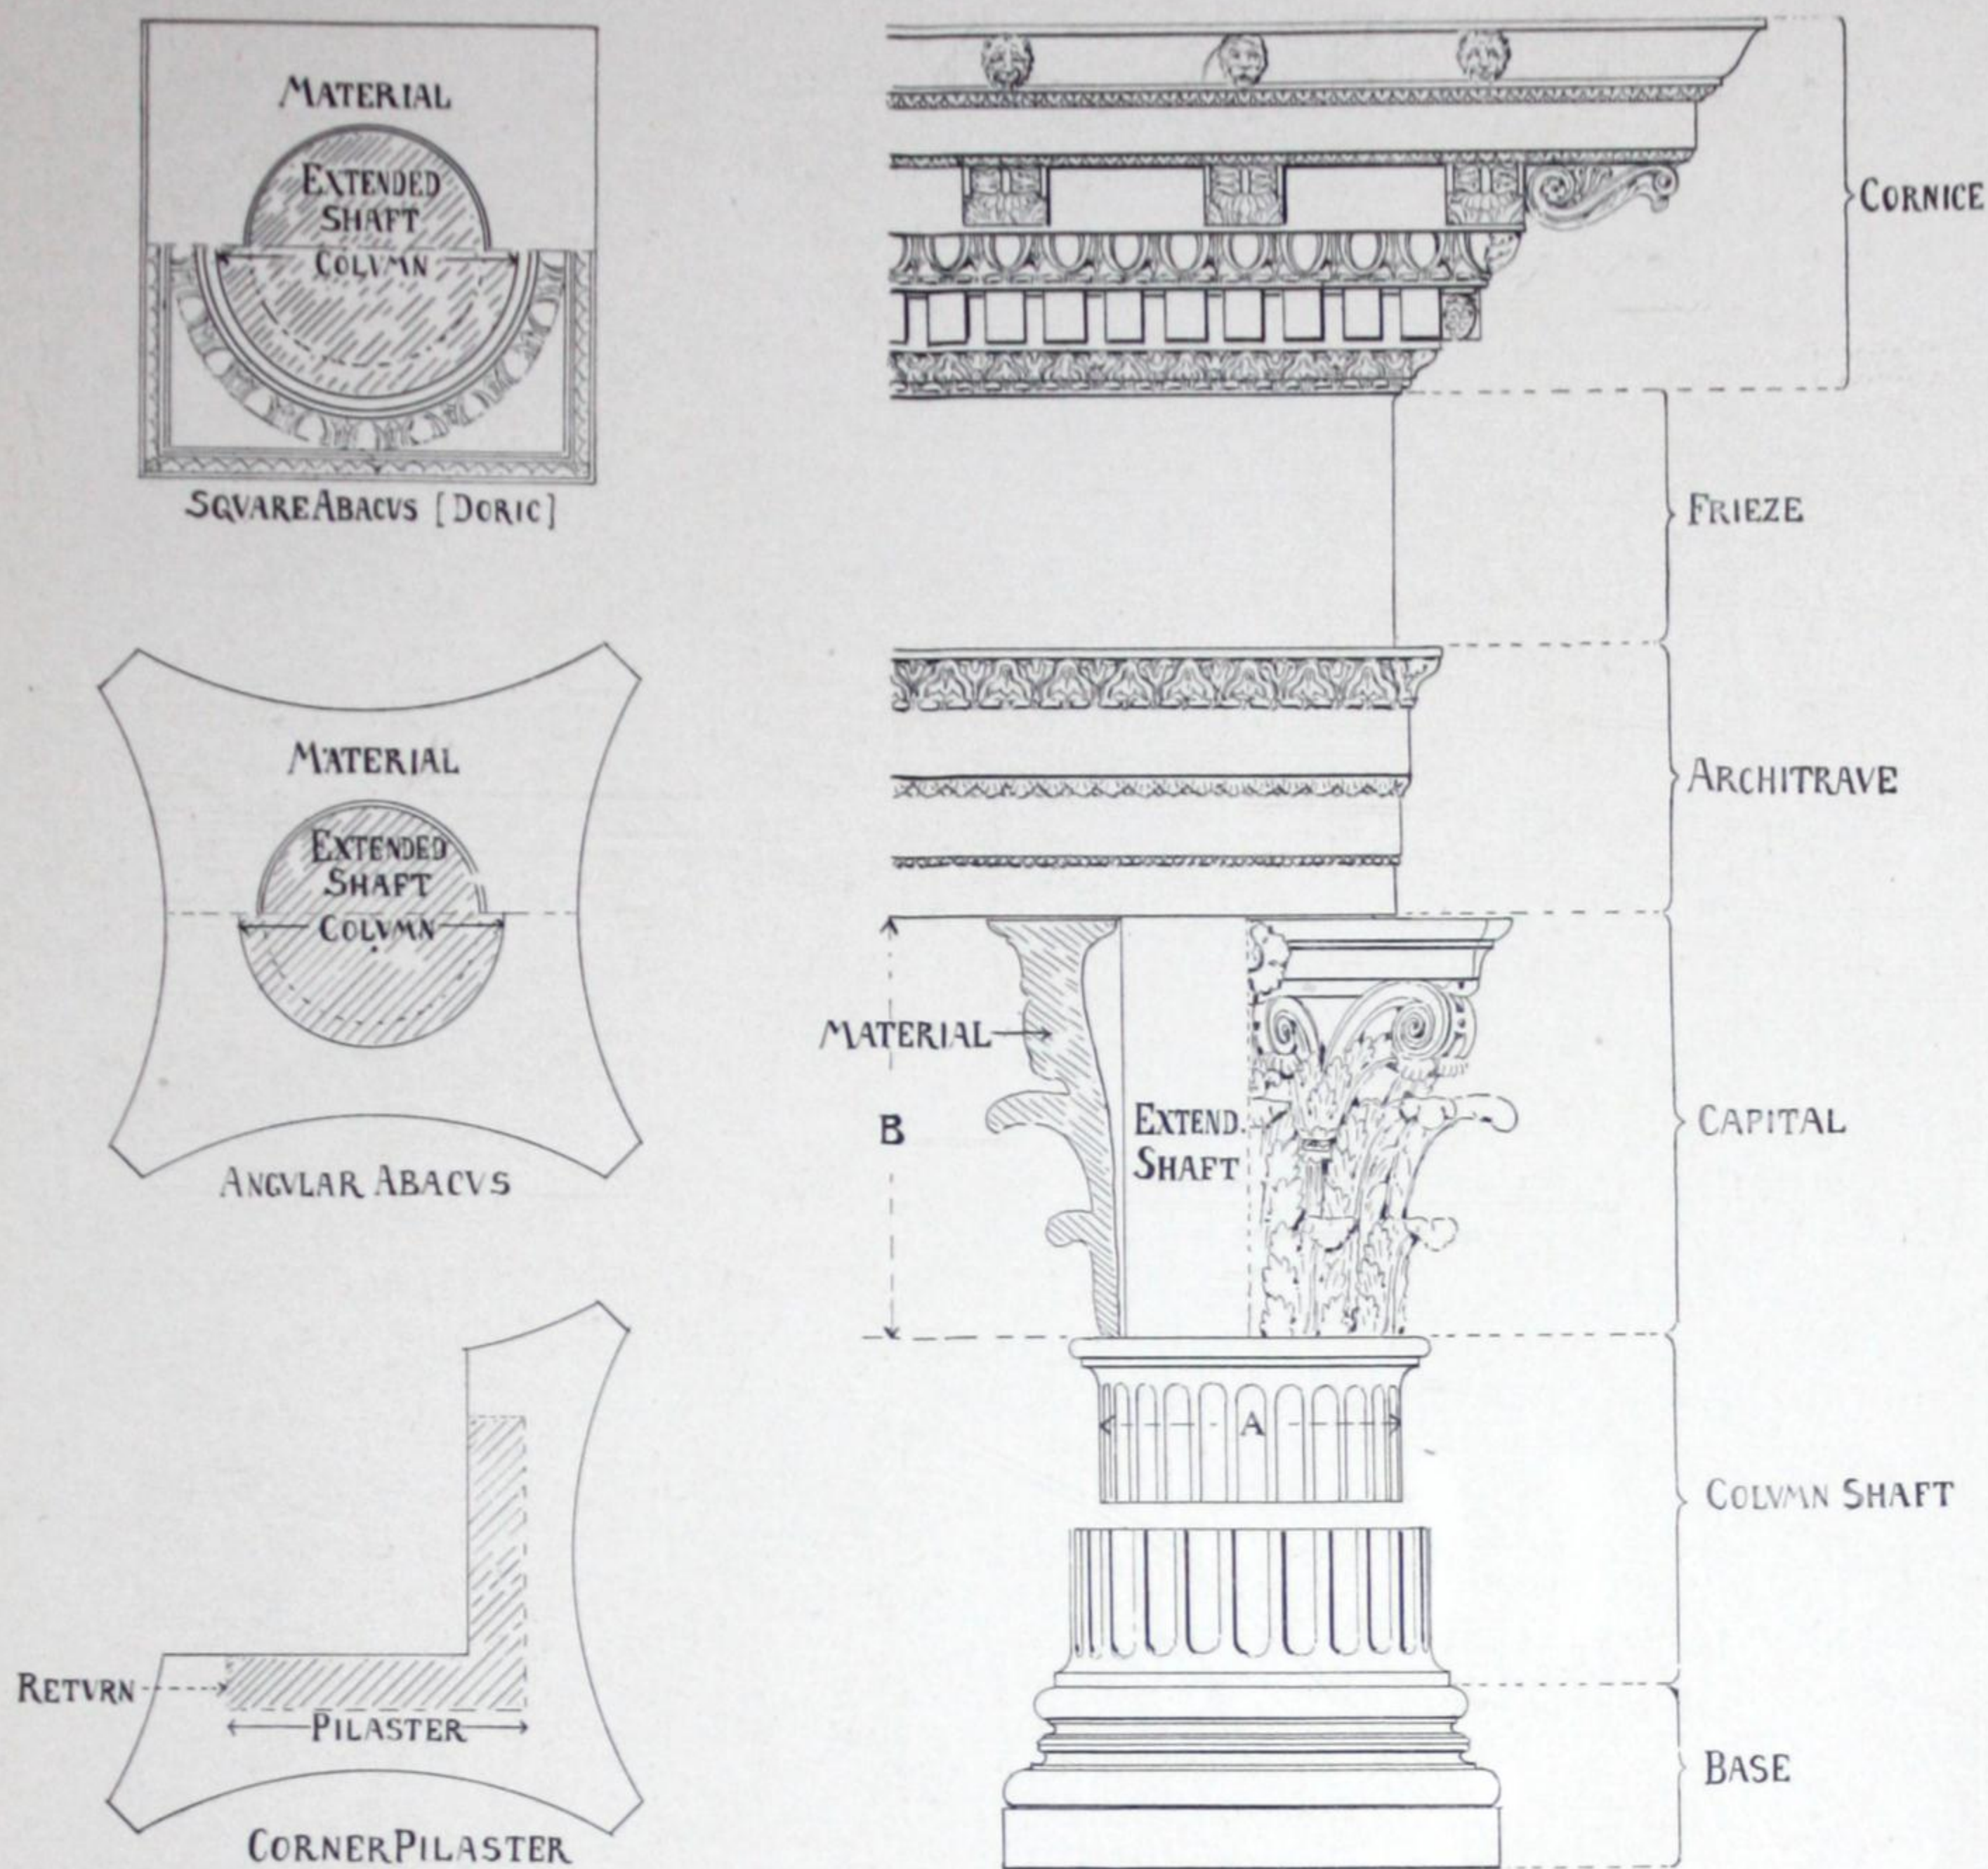

EXTERIOR COMPOSITION—This material should be screwed or nailed in place and must be painted like woodwork. The joints should be filled up with painters' oil putty after the first coat of paint has been applied.

INTERIOR COMPOSITION—This material should be applied to the wood surface before the wood is either filled or finished. We ship it in a pliable condition and it can be kept in that state for some time by covering it with a damp cloth. Care should, however, be taken that the cloth does not come in direct contact with the ornaments. Before applying composition ornaments place the same on a piece of canvas stretched over a vessel containing hot (not boiling) water. Cover canvas lightly with thin cabinet-makers' glue and place composition on same. Apply it to the wood by pressing it in place tightly with fingers. Then use thin wire brads for further protection. In applying composition mouldings, dip the ends in hot water, then crowd them closely together so that the joints will not open when the composition dries out.

CEMENT ORNAMENTS—This material is shipped in blocks like stone if it is to be built into brick or stone walls. If used on cement plastered surfaces, the ornaments are either casted free or on a backplate. Wire hooks are inserted in the casts as a means of fastening the ornaments to either wood or wire lath.

In ordering
of diameter at
Height of cap

The exte
so that the
shaft and no

INSTRUCTIONS

In ordering column capitals, state exact size of diameter at neck as indicated by letter "A." Height of capital as indicated by letter "B."

In ordering pilaster capitals, state exact width of pilaster at neck, height of pilaster at neck and return of pilaster at neck.

Size of Extended Shaft or Core.

For a 6 inch cap the extended shaft will be	4	inches diameter.
For a 7 inch cap the extended shaft will be	5	inches diameter.
For a 8 inch cap the extended shaft will be	6	inches diameter.
For a 9 inch cap the extended shaft will be	7	inches diameter.
For a 10 inch cap the extended shaft will be	8	inches diameter.
For a 11 inch cap the extended shaft will be	8½	inches diameter.
For a 12 inch cap the extended shaft will be	9½	inches diameter.
For a 13 inch cap the extended shaft will be	10¼	inches diameter.
For a 14 inch cap the extended shaft will be	11¼	inches diameter.
For a 15 inch cap the extended shaft will be	12	inches diameter.
For a 16 inch cap the extended shaft will be	13	inches diameter.
For a 18 inch cap the extended shaft will be	14¾	inches diameter.
For a 20 inch cap the extended shaft will be	16½	inches diameter.
For a 22 inch cap the extended shaft will be	18¼	inches diameter.
For a 24 inch cap the extended shaft will be	20	inches diameter.
For a 30 inch cap the extended shaft will be	25	inches diameter.

The extended shaft must be a trifle longer so that the concentrated weight will rest on shaft and not on capital.

The interior caps have a solid wood foundation and require no core on column, but are fastened to column or pilaster like a hand carved cap.

We make the above listed bases in fibrous plaster for "Interior"; in Portland cement for "Exterior."
All sizes and styles not listed can be made to order.

For instructions, see page No. 4.

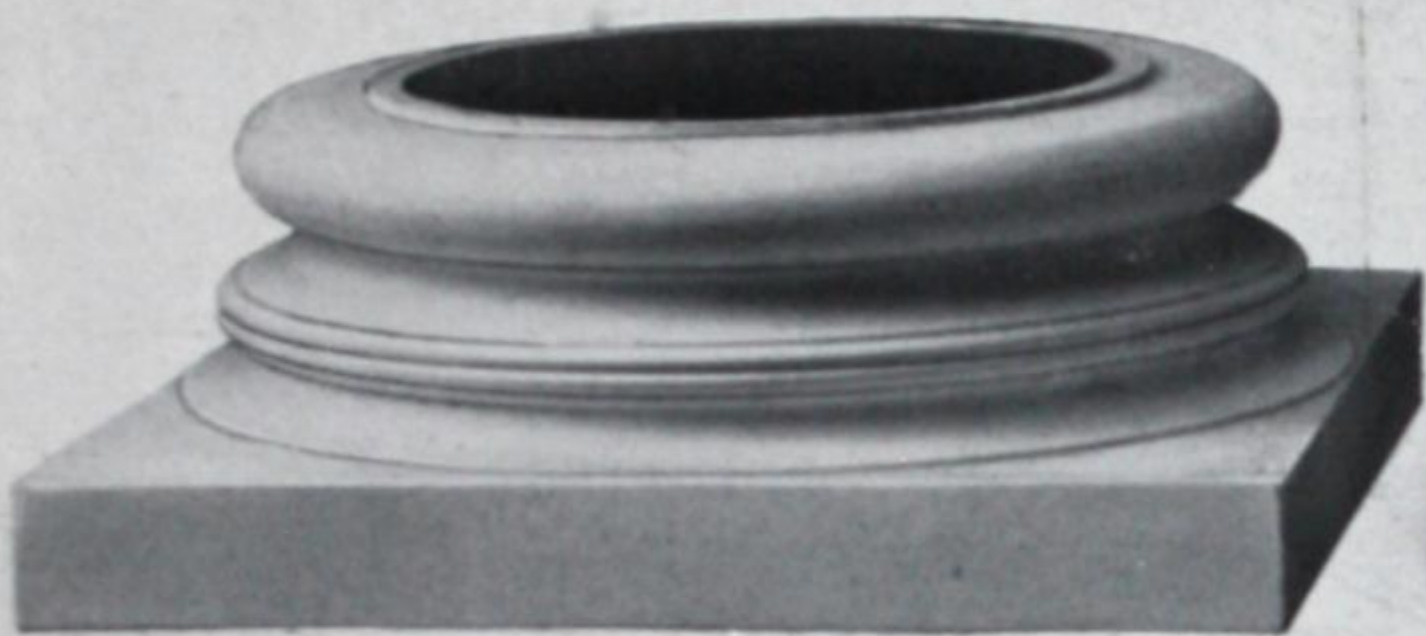

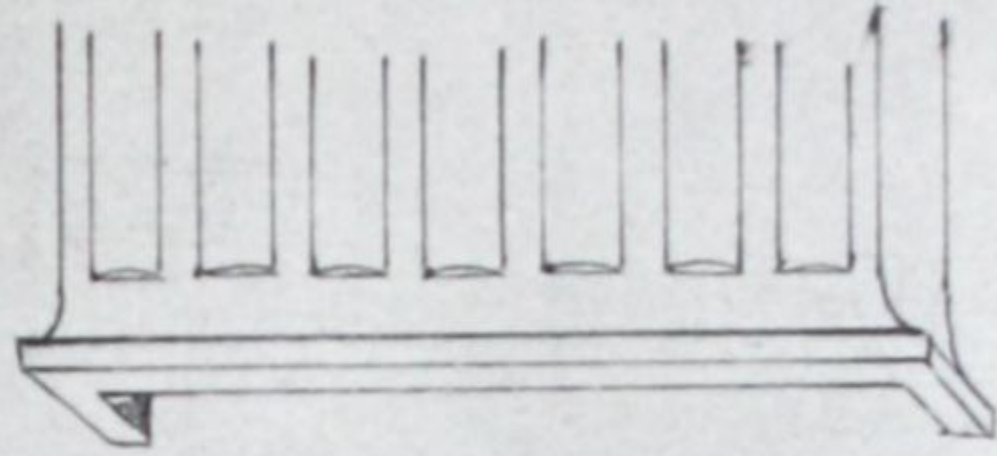

The list prices on pilaster bases are for half square bases only. Over half or full square are same price as corresponding column base.

Above Prices Subject to Discount.

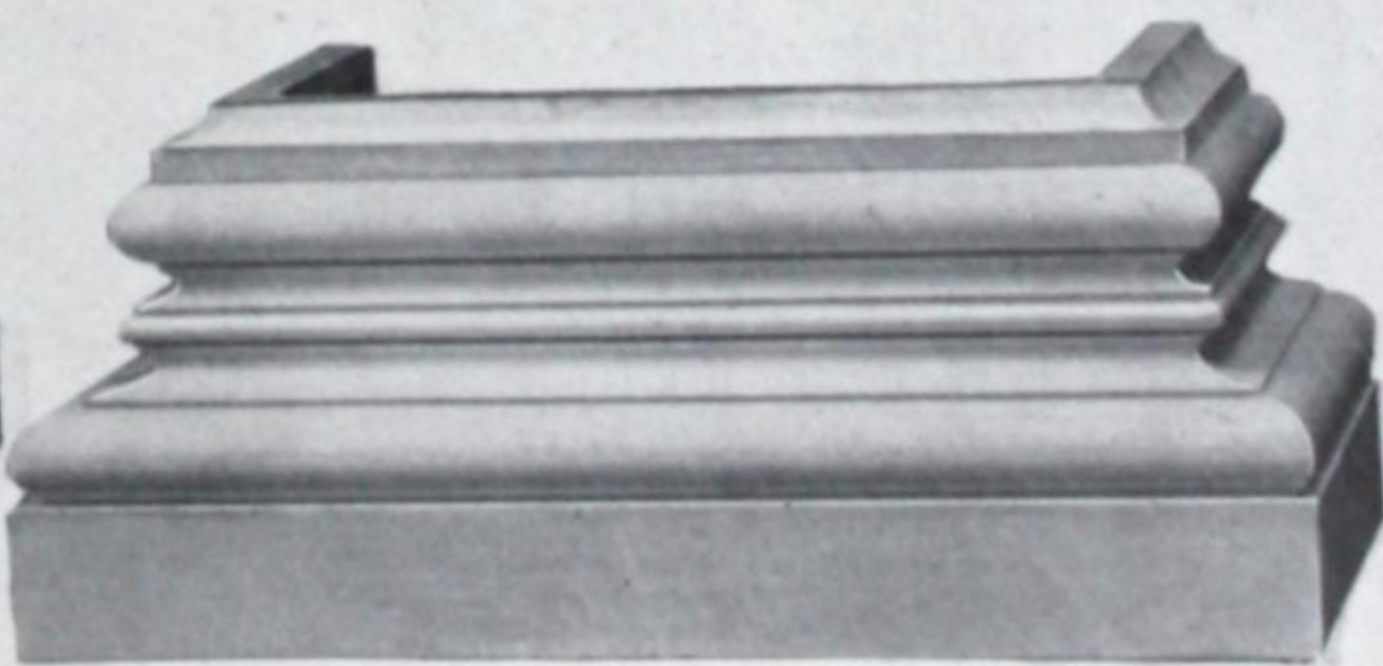

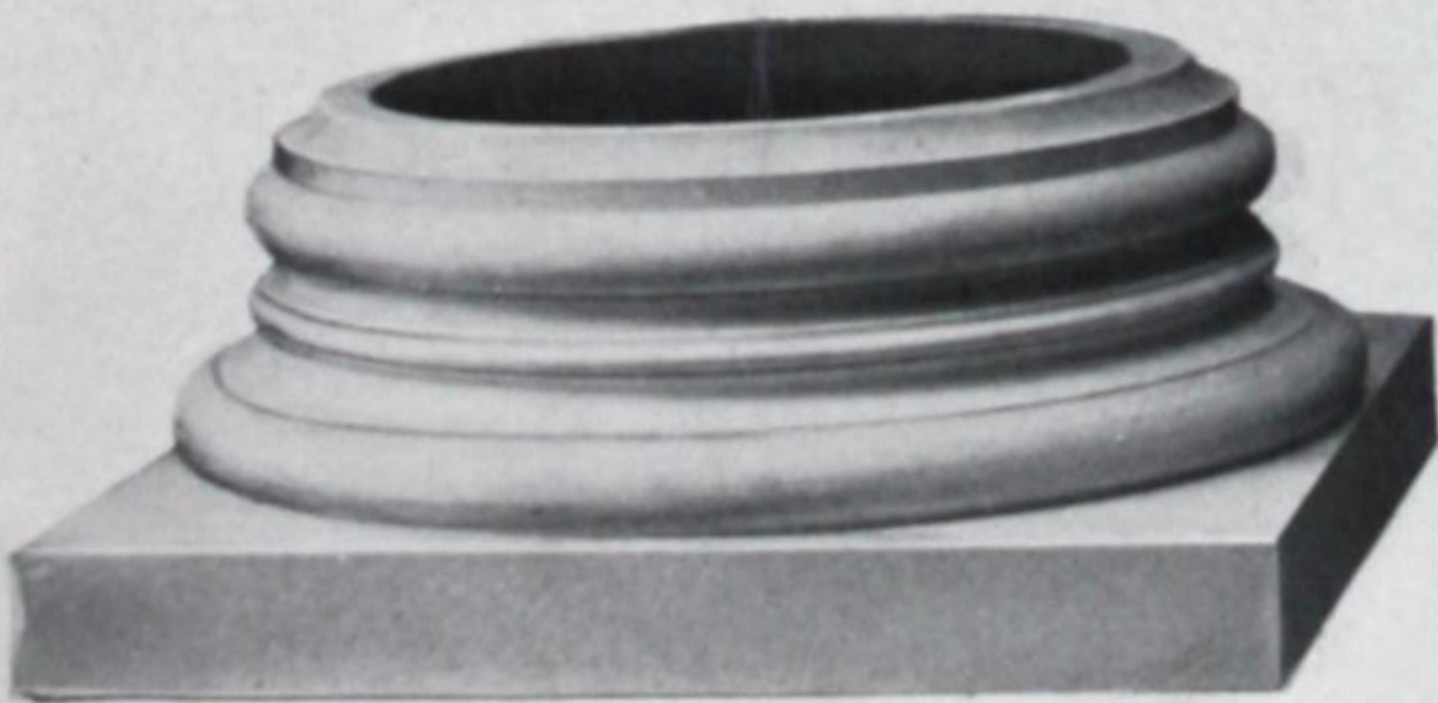

The above cuts illustrate how the different measures are taken.
